Proposed theme and scope of research for M.Phil./Ph.D.

Effect of elevated CO<sub>2</sub> levels on ROS and associated scavenging mechanisms during Tomato fruit ripening

Major writings in the field in which you would like to pursue your M.Phil./Ph.D.

The CO<sub>2</sub> concentration in atmosphere is increasing at an alarming rate of 2ppm/annum. CO<sub>2</sub> being a key factor in plant photosynthesis determines various aspects. Investigators like Rothan et al. 1997, demonstrated the effect of elevated CO<sub>2</sub> in suppression of ethylene biosynthesis during tomato fruit ripening. Since ethylene is a major ripening hormone whose levels increase during climacteric, leading to rise in respiration which accompanies with ROS increase (Jimenez et al. 2002), such a research can provide a futuristic scenario of the effects of elevated CO<sub>2</sub> levels in fruit ripening through ROS modifications, since fruit ripening being a stressful process.

Primary sources/field work, methodology, hypothesis/research, questions and issues in the proposed field of interest.

#### Proposed theme and scope of research for M.Phil./Ph.D.

Exploring the existence of imprinting genes in *Nymphaea L.* through transcriptome analysis.

#### Major writings in the field in which you would like to pursue your M.Phil./Ph.D.

Plant biologists have long been attempting to reconstruct angiosperm evolutionary history to determine the genesis of angiosperms. Paleobotanical studies support the view that the ANITA clades. Imprinting in higher plants has often been linked with triploid nature of endosperm. Among higher angiosperms, the endosperm is triploid with 2 maternal:1 paternal genome complement, resulting from the fusion of the diploid maternal central cell nucleus with a sperm cell (Luo et al., 2011; PLoS Genet. 7: e1002125). This requirement of 2 maternal:1 paternal genome ratio has been shown in eudicots (*Arabidopsis*) (Scott et al., 1998: Development 125: 3329-3341; Alleman and Doctor, 2000: Plant Mol. Biol. 43, 147-161; Wollmann and Berger, 2012 : Current Opinion in Plant Biology 15:63-69) as well as monocots i.e. rice and maize. In basal angiosperms, endosperm is diploid by nature, which might be representing the ancestral state (Friedman 2001: Evolution Int J Org Evolution 55:217-231; Williams and Friedman 2002: Nature 415, 522-526). Because of this property, *Nymphaea* can be a model system to raise and answer some of the basic questions about imprinting in plants.

Primary sources/field work, methodology, hypothesis/research, questions and issues in the proposed field of interest.

Proposed theme and scope of research for M.Phil./Ph.D.

Plant biotechnology

Major writings in the field in which you would like to pursue your M.Phil./Ph.D.

The progression of technology and the effects it had on civilization has always fascinated me, and generated within me a profound interest in biotechnology. I want to pursue plant biotechnology as my primary choice of interest. Also In my M.Sc I done my dessertation on EDIBLE VACCINES. This is where I wish to continue my studies.

Primary sources/field work, methodology, hypothesis/research, questions and issues in the proposed field of interest.
