

Criterion-7: Institutional Values and Best Practices

Key Indicator – 7.1: Institutional Values and Social Responsibilities

Metric: 7.1.4

To maximize conservation of water resources and minimize wastage, the University has taken various steps in the form of rainwater harvesting and wastewater recycling. The University has centralized mechanisms for rainwater harvesting, as well as wastewater recycling.

Rainwater harvesting system is at place in DU South Campus (water level is reasonably high at the North Campus). There are multiple underground water storage tanks at DU South Campus for conserving rainwater to cater to the needs of the Campus. Regular maintenance of water harvesting pits and other miscellaneous repairs are done on a timely basis.

Liquid waste management is given utmost focus with all facilities available in the University. All due care is taken to dispose of the waste according to due procedures and mechanisms. A Sewage Treatment Plant (STP) of 400 KLD has been installed at the Girls' Hostel premise at the Dhaka Hostel Complex, Mukherjee Nagar. The sewage waste water from the various hostels and staff quarters is treated by the STP. To start with, large or small-sized components are removed. Then biological treatment is given, using aerobic microorganisms. Thereafter, the sludge is filtered through a Pressurized Sand Filter (PSF) & Activated Carbon Filter (ACF) and then treated with UV. The recycled water is used for gardening and flushing of toilets. This ensures optimal utilization and recycling of waste water to create a sustainable campus and thereby reducing burden on water resources.

As can be observed from the tariff that Delhi Jal Board emphasizes on the conservation of water and tariff is designed on the principle- 'Use More Pay More'. Hence, consumers are advised to conserve water by:-

1. Plugging all leakages in pipes, joints, taps, overhead tanks etc.
2. To use kitchen waste water for gardening purposes.
3. To wash vehicle etc. by bucket instead of pipe.
4. Install valve before meter and close it when water is not use.
5. Consumers should use MDPE pipes for underground position for carrying portable water.

Tariff consists of following components:

1. Water to be measured on volumetric charges of water consumed as reported in meter.
2. Sewerage maintenance charge- @60% of water volumetric consumption charges.
3. Service Charges-Levied on the basis of slab wise consumption
4. Meter rent in case meter has been provided by DJB

How to Calculate Bill- Divide the total units consumed by number of days for which bill has been issued and multiply by 30 to give per month average water consumption. Water consumption charge (multiplying monthly charge by the actual period of reading) will be calculated as per tariff for the respective category as mentioned above. Sewerage maintenance charge will be 60% of water consumption charges. Add service charges as per respective category and Consumption slab. It will give you the bill amount
